TOTAL ECLIPSE OF MOON ON APRIL 21.

A total lunar eclipse will be visible throughout the United States the night of April 21. The moon then will be north of the center of the earth's shadow, but nevertheless near enough to it to become completely immersed. At 11:57 o'clock in the evening the moon first touches the penumbra, but it will not be until well after midnight that the darkening becomes conspicuous. Three minutes after 1 o'clock in the morning of April 22 the edge of the true shadow will be reached and more and more of the moon will be hidden until at 2:23 o'clock it will be completely obscured except for the faint reddish light refracted through the earth's atmosphere.

Totality will last only forty-two minutes and the moon will be entirely clear of the shadow at 4:26 o'clock though it does not leave the penumbra until 5:22 o'clock.

The bright star Spica will be within ten degrees of the eclipsed moon

making a very pretty spectacle for anyone who will be up to see it.
